

Hi everyone!

I'm Gaurav Kumar. I recently completed my Data Science & Machine Learning internship at Upskill Campus.

During my internship, I gained hands-on experience by working on two industry-oriented projects: Predictive Maintenance of Gearbox using Vibration Sensors and Forecasting Smart City Traffic Patterns. Through these projects, I enhanced my understanding of data analysis, feature engineering, machine learning algorithms, and real-world problem solving.

I sincerely thank the mentors and the Upskill Campus team for their valuable guidance and support. This internship has strengthened my practical skills and boosted my confidence in the field of Data Science and Machine Learning.

Thank you!
